---

## Abstract

This is the abstract.

It consists of two paragraphs.

---

## Introduction

The context is important ([Dirac, 1953](#)). for example, [Feynman and Vernon Jr. \(1963\)](#) say it.

## Methodology

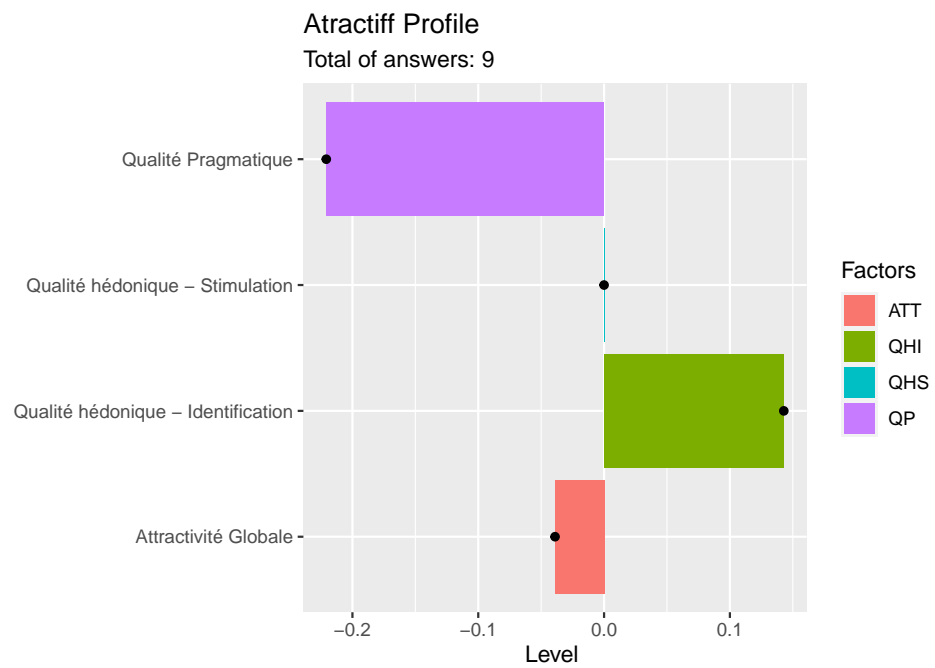

This is the first Graph

## Results

The Elsevier article class is based on the standard article class and supports almost all of the functionality of that class. In addition, it features commands and options to format the

- document style
- baselineskip
- front matter

- keywords and MSC codes
- theorems, definitions and proofs
- labels of enumerations
- citation style and labeling.

### **Front matter**

The author names and affiliations could be formatted in two ways:

- (1) Group the authors per affiliation.
- (2) Use footnotes to indicate the affiliations.

See the front matter of this document for examples. You are recommended to conform your choice to the journal you are submitting to.

### **Bibliography styles**

There are various bibliography styles available. You can select the style of your choice in the preamble of this document. These styles are Elsevier styles based on standard styles like Harvard and Vancouver. Please use BibTeX to generate your bibliography and include DOIs whenever available.

Here are two sample references: ([Dirac, 1953](#); [Feynman and Vernon Jr.; 1963](#)).
